

```
#include <stdio.h>
#include <stdlib.h>
#define FIFO_FILE "MYFIFO"
int main(int argc, char *argv[])
{
    FILE *fp;

    if ( argc != 2 ) {
        printf("USAGE: fifoclient [string]\n");
        exit(1);
    }

    if((fp = fopen(FIFO_FILE, "w")) == NULL) {
        perror("fopen");
        exit(1);
    }

    fputs(argv[1], fp);

    fclose(fp);
    return(0);
}
```
